

PROGRESSIVE CAPITAL PARTNERS

BRIDGING THE GAP

WHY NICHE ALTERNATIVE STRATEGIES
SHOULD HAVE THEIR PLACE IN AN
INSTITUTIONAL PORTFOLIO

IN A NUTSHELL:

- Niche Alternative investments build on the concept of superior risk and reward
- The segment has a strong track record of outperformance, and is currently very attractively priced
- Adding Niche Alternative exposure to an existing alternative portfolio will enhance the overall diversification of the portfolio
- The risk and challenges of investing in this space need to be carefully attuned to the benefits
- Constructing an attractive Niche Alternatives portfolio involves both expertise and access to attractive deal flow

The alternative asset management industry is faced with growing pressure and a credibility problem, as liquid alternative investment strategies have delivered disappointing returns for some time now.

At the illiquid end of the spectrum, the wave of capital chasing the strong historical returns of private equity has pushed valuation to levels that cause financial analysts to forecast substantially lower future returns (Blackrock, 2018).

Still, global financial markets should offer plenty of attractive investment opportunities today. Therefore, an investor should be able to build a diversified portfolio that is positioned on the efficient frontier, and dynamically adjust the holdings to the changing market conditions to keep moving towards the desired investment goal. The reality tends to be entirely different. The majority of the investment industry still uses asset allocation approaches that propose a mostly static allocation to each asset class and sub-categories. As a consequence, many professional investors are not able to capitalise on the value opportunities that financial markets regularly offer, as their investment process is not fast and flexible enough to act during the limited time window.

In order to superior results in investing and in most other domains “doing the right things” is of a higher order than “doing things right”.

To be clear, by no means do we advocate for anything less than the best in class when it comes to investment, due diligence and business operations (avoid unpaid risks), but to achieve superior returns, it is critical to select an investment universe where there is low competition, and the risk/reward profile is favourable (selecting mispriced risks).

NICHE ALTERNATIVES: PRE-INSTITUTIONAL ASSETS AND TEMPORARILY ABANDONED INVESTMENT THEMES.

There is a section within the alternative investment space where inefficiencies are numerous, competition is low, and active management by skilled and focused investment specialists can add substantial value. We call this segment of the investment universe “Niche Alternatives”.

Niche Alternatives offer a very attractive risk/reward trade-off and can help strengthen and diversify existing traditional, but more importantly alternative asset allocations.

BEING ASSOCIATED WITH SO-CALLED UN-INVESTABLE ASSETS IS OFTEN SEEN AS AN UNNECESSARY CAREER RISK.

Typically, these are areas where there is limited historical data available for backtesting and portfolio optimisation, or markets which had been over-hyped in the distant past and since have done poorly for a long time. Therefore, such assets, industries or countries are often regarded as “un-investable” by many at that time.

For professional investors, being associated with such failures is often considered a career risk, and therefore the wider investment community still tries to exit positions in such assets. This pushes the price below fair value.

Another reason for outsized expected returns can be that a mix of increased regulation and the silo-effect among allocators that prevent capital to flow to areas that are not strictly complying with defined investment guidelines. Currently, this is the case for many investments which require a 2-5 year time horizon as they neither fit the liquid nor the private equity buckets. Not only because of that but also due to the regulation glut and the quantitative easing (QE) policies by global central banks distorting the term-structure for risk since the global financial crisis (GFC), an allocation to semi-liquid Niche Alternative and co-investment strategies becomes particularly attractive today.

A common explanation for these extra return premiums is that financial investors are not assessing certain pockets in the market from a purely economic point of view. Quite often such omissions can be entirely rational from the perspective of the particular allocator.

For example, for a large asset manager to analyse and monitor a USD 20 million niche opportunity requires the same time as to assess a USD 100 million classic opportunity. Therefore, to deploy the same capital in smaller Niche Alternative opportunities needs five times the resources. Consequently, the decision to focus on the more sizeable opportunity might be the rational thing to do.

Even more so, a dedicated team of Niche Alternative specialists is needed to harvest most of the offered risk premiums by looking beyond the “silo-ing” of asset classes, by objectively assessing the risk/reward characteristics of the opportunities, and by creating a portfolio of asymmetric return streams.

DOING THE RIGHT THING - THE CASE FOR NICHE ALTERNATIVES

“GREAT THINGS NEVER CAME FROM COMFORT ZONES.”

- OLD PROVERB THAT APPLIES WELL TO INVESTING

To be very clear, we don't mean that we are investing in areas where we are not comfortable. It means that we look for areas in the market, where the broader investment community feels uncomfortable to invest; or even better where the current holders of positions feel they need to sell an investment and are willing to accept a fire sale price to exit an otherwise good asset.

A common example is a liquidator of collateral for whom the primary goal is to cover the defaulted loan as soon as possible, rather than wait and optimise the future return of the collateral.

Due to the broad field and the specific characteristics in Niche Alternatives, the best approach to look at this investment segment is to apply a value and contrarian led investment methodology.

That is, over the business cycle, capital should be deployed in areas which are temporarily out of favour – in some cases even considered un-investable by the wider investment community, and shifted away from markets and asset classes where investors feel over-confident, mostly due to past good performance, but offer little risk premium anymore.

The Progressive Capital Partners team actively searches for new markets and investment themes which meet the above-explained criteria of being temporarily abandoned or disdained by the wider investment community, and therefore offer an idiosyncratic return profile. We search for constellations where solid but abandoned assets meet improving underlying fundamentals.

The embedded value in these opportunities creates a beneficial risk/return profile.

Those smaller opportunities attract low competition as large asset managers, and investment banks focus on more established, larger capacity opportunities, where they can allocate more capital or generate higher fees, which in return enhanced the already beneficial risk/reward profile.

Banks – from their perspective – made a perfectly rational decision to pull-out of lending against legal claims, as the overall market size, the relative complexity of the business, and the capital requirements on their balance sheet made this market segment not the best use of their finite time and capital. As a result, the risk premium for lending against legal claims increased by more than 100%.

Further areas where the market currently offers outsized risk- and illiquidity-premia are music royalties, shipping, or specialty-infrastructure, such as class-A warehouses in Russia.

In summary, acquiring Niche Alternative investments at attractive valuations is a vital element in the path to generate a decent outperformance. However, even though building-up and exiting an investment is a critical element to performance, the key to long-term success ultimately lies in selecting solid opportunities and right-sizing these in holistic portfolio construction.

DOING THINGS RIGHT - KNOW THE RISKS

Conventional alternative investment approaches are often considered proven and reliable because they are broadly used, have historical returns available and are seemingly less risky. In comparison Niche Alternative opportunities often bring much more complexity. The wide-ranging field of the opportunity set, the required network of specialists, the very case-specific data or lack of thereof, the significant

OPPORTUNITIES CAN RANGE FROM LIQUID BUT CAPACITY CONSTRAINED LISTED CLOSED-END-FUNDS TO PRIVATE TRANSACTIONS, AND EACH INVESTMENT CATEGORY HAS ITS SPECIFIC EXPECTED RETURN PATTERNS UNDER DIFFERENT MARKET/ ECONOMIC REGIMES.

IT CAN BE VERY STIMULATING TO PERCEIVE THE PATH FORWARD FOR A PARTICULAR NICHE ALTERNATIVE STRATEGY.

volume of potential opportunities to sort through and analyse can be overwhelming compared to more traditional areas of the alternative investment space.

Some investment approaches are going to develop and mature and will grow into conventional alternative assets, whereas others offer striking risk/return opportunities merely for a restricted time window. That makes it essential to decide where to assign the limited time of the investment team most effectively.

As with any other investment opportunity, the benefits and challenges must be weighted. Careful consideration must be given to how one will approach such investments during the limited time window the market offers such attractive returns. Moreover, it is necessary to have a harvesting plan before entering into a niche strategy position because the liquidity can often be more challenging on the way out.

Contrariwise, since the return distribution among different Niche Alternative opportunities and co-investments can diverge broadly, picking a single niche opportunity or a single strategy can be very risky. Hence, our approach to investing in Niche Alternatives is through a holistic portfolio, where built-in diversification reduces the idiosyncratic deal risk. Also, this makes the wider dispersion of returns work in favour of the beneficiaries. This is classic finance theory of diversification leading to lower pool risk than the specific risk related to any single investment in the portfolio.

OUR NICHE ALTERNATIVES CLASSIFICATION:

- LISTED VEHICLES
- PRIVATE DEBT / CLO'S
- APPRAISAL RIGHTS / LITIGATION FINANCING
- SECONDARY ALTERNATIVES
- OTHER NICHE ALTERNATIVE FUNDS AND CO-INVESTMENTS

Again, whereas Niche Alternative opportunities have a superior risk/return profile compared to more conventional alternative investments, they also deliver a considerable array of possible outcomes. This dispersion needs to be accounted for in the portfolio management approach. We tackle this challenge by assigning maximum exposures to different risk factors and then decide if the projected return, sensitivity and correlation characteristics are sufficiently robust for the specific investment to win a spot in the portfolio.

For analysis purposes, our methodology is to group different niche opportunities in buckets with similar characteristics and to use the same lenses for assessing the fundamental attractiveness, the various risks, and the payout structure for the different opportunities.

LISTED VEHICLES

Our focus in "listed vehicles" is on exchange-listed funds where good assets trade at substantial discounts to NAV, and where we can see a path to closing this discount over a reasonable period. Such discounts arise typically due to irrational selling following periods for disappointing performance or occasionally they are triggered by technical dislocation.

An example for the latter was an investment in a German open-end listed real estate fund in 2012/13. Due to regulatory change nine German real estate funds were forced by BAFIN (German Regulator) to liquidate their funds within five years. This decision triggered selling by mandates which were not allowed anymore to hold such a structure. Progressive Capital analysed all funds and selected the most promising for an investment. We bought most to the position at a discount of -40% to NAV knowing that we would receive the full NAV back no later than five years and that we would receive regular distributions during the liquidation.

A very favorable tail-wind for this strategy is the basis effect; meaning from 40% discounts to NAV is an upside of 66.7%. In this case, our fund exited most of the position in 2015 when the NAV discount narrowed to less than -20%.

APPRAISAL RIGHTS/LITIGATION FINANCING

In "Appraisal rights/litigation financing" we focus on legal related investment opportunities. It is a wide investment field, ranging from financing commercial litigation to international arbitration, to lending against legal claims, or making use of minority shareholder rights, which are structured to have option-like pay-off profiles. While competition in the space is limited and therefore expected returns very attractive, we appreciate the low correlation to financial markets as the investment outcome is not related to the economy but based on the grounds of the law.

SECONDARY ALTERNATIVES

Given our semi-liquid investment mandate, our focus on "secondary alternatives" is on tail-end private equity and side-pocket buying. This field is characterised by information asymmetry and working with well-connected partners which is the basis to add alpha. Moreover, it is important to acknowledge that this opportunity-set as well as pricing is highly cyclical and therefore pro-actively navigating the exposure adds to the margins-of-safety.

CO-INVESTMENT OPPORTUNITIES

Additionally, we are constantly looking for co-investment opportunities often in the event-driven space, where regulatory barriers or human behavioural patterns have created irrational pricing and asymmetric risk/reward patterns.

Constructing a portfolio that carefully accounts for the respective risk factors while ignoring the classic asset categorization

With this information, we construct a portfolio of asymmetric return streams, accounting for the explicit risks of each investment, the expected performance and pay-out structure to obey the demands of the mandate.

We create an edge by ignoring the classic asset-class categorisation and by combining solidly established alpha sources with attractive niche opportunities that are not overcrowded at the time of our investment. We do not aim to have an allocation to each of the above categories at all times, but rather shift capital to the areas which offer the best risk/rewards over the cycle.

THE BENEFIT OF NICHE ALTERNATIVES IN THE ASSET ALLOCATION

Adding Niche Alternative exposure into a blend of traditional asset classes and established alternative investments increases the portfolio returns while reducing the risk of capital loss.

Niche Alternatives are a way to achieve the original purpose of alternative assets in the portfolio context. Even more, Niche Alternatives can improve the quality of the overall portfolio, by adding superior return streams with complementary correlation characteristics. This is realised by accessing the differentiating alpha these strategies generate, and doing so through a complementary allocation could be highly additive to a broader portfolio.

Unfortunately, established alternative asset classes have lost a large part of these benefits as it seems that over-allocation has diluted the finite amount of alpha, and the synchronised risk-on/off behaviour has eaten into the correlation benefit. The challenge in piloting this extensive but rewarding market can be overwhelming or even unmanageable for many financial market experts. Especially when success in the Niche Alternative space centres on dedicated expertise, experience, a broad network of industry contacts to be able to source a constant attractive deal flow, and a proven, comprehensive due diligence and portfolio management process.

PROGRESSIVE'S TRACK RECORD IN NICHE ALTERNATIVES

Progressive Capital Partners has extensive experience across alternative and niche markets, and the team is well positioned to target innovative investment opportunities that are beyond classic alternative investment strategies. The key people have more than 25 years of industry experience and have successfully managed dedicated alternative and Niche Alternative strategies for more than a decade now. The team has long experience, an extensive network, and know-how to source opportunities in the Niche Alternative space which are off-the-beaten-track and difficult to uncover.

CONCLUSION

Niche Alternative investments build on the concept of superior risk and reward. The rewards are clear: this segment of the alternative investment market has a strong track record of outperformance, and is currently very attractively priced in comparison to traditional as well as established alternative asset classes.

Progressive Capital Partners provides the original value proposition of alternative asset allocations, which are: firstly, to provide a differentiated return stream that is superior per unit of risk, and secondly, to meaningfully diversify a traditional portfolio.

Adding Niche Alternative exposure to an existing alternative portfolio will enhance the overall diversification of the portfolio. But the risk and challenges of investing in this space need to be carefully attuned with the benefits. The Niche Alternative field is extensive with a wide range of opportunities, and to construct an attractive portfolio involves both expertise and access to attractive deal flow.

THE AUTHORS

INVESTMENT PERSPECTIVE

Flurin Grond is Deputy CIO at Progressive Capital Partners. Before, he spent 5 years as Portfolio Manager at the Abu Dhabi sovereign wealth fund ADIA, where he focused on alternative equity strategies in the hedge fund group. Prior to that, Flurin worked 10 years at Man Group (RMF) in the Equity Hedge and Global Macro section and in equity trading for various Swiss banks. Flurin holds an MBA (with distinction) from the Strathclyde University Glasgow, and he is a Certified International Investment Analyst (CIIA) as well as a Chartered Alternative Investment Analyst (CAIA).

RISK PERSPECTIVE

Dr. oec HSG Thomas Kochanek is COO and Investment Risk Manager at Progressive Capital Partners. Before, he worked in alternative investments and structured products at an investment bank in Germany, as a Director of a Malta-based Alternative Investment platform and as Co-CEO of a Zurich-based quantitative hedge fund. Thomas holds a PhD from the University of St.Gallen, an MBA from Western Illinois University, a business diploma (Diplom-Kaufmann) from University of Mannheim and he is Research Professor for Financial Services at Hankou University in Wuhan, China.

We at Progressive Capital Partners would be delighted to be your partner on your journey into the Niche Alternative world. We would be honoured to be able to contribute to the quality of your overall asset allocation.
